

STRIDE Project

STRategies for the Digital Education

2016-1-IT02-KA201-024567

Newsletter #4 - January 2019

The Project

The STRIDE project aims to create a digitalization strategy for education and will provide professional development for teachers and inform schools on the most appropriate software required to schools into the new information age.

The project has two main outputs: Firstly, a **training path** for the definition of digitization strategies for the schools will be aimed at updating the teachers' and headmasters' competences on the topic, and secondly, a **web community platform**, aimed at becoming a landmark for the community of teachers, headmasters, training experts and ICT experts for the ongoing updating of strategies, innovative tools and methodologies in order to keep steady pace with the technological progress and the school environment needs.

The **main objective** of the project is to help schools meet their respective national plans, allowing them to begin a process of digitization under the guidance of experts in the field as well as to increase the skills and knowledge of ICT of teachers and staff.

The project is funded by the **European Union** as a **Strategic Partnership for School Education (KA2)** under the programme **Erasmus+**.

Co-funded by the
Erasmus+ Programme
of the European Union

End of the Project

Starting in September 2016, STRIDE made its last efforts in November 2018. After two years of hard work, we're successfully closing the project by delivering to the public our main products.

We'd like to thank all of our partners for their hard work and the successful deployment of the productions that aim highly for a better and more digital education.

And of course, thank you to all of our stakeholders that showed interest and collaborated in the activities of STRIDE.

Below you have a summary of the deliverables of the project.

Training Path

The training path defines a set of operative strategies of digitalization of the school environment that includes methodologies, tools and competences, as well as informative and formative resources to raise awareness on teachers and staff on the need of defining and implementing digitalization strategies.

The training path is defined and tailored by each participating school, and at the same time follows the national and European policies on the matter. The contents of this training path is free and available online through the community platform.

Web Platform and Community

The **Web Platform** provides a landmark for the teachers, headmasters and training and ICT experts for the ongoing updating of digitalisation strategies, innovative tools and methodologies.

We want to help you in keeping steady pace with the technological progress and the school environment needs.

Multiplier event in ...

Replace this block with a description and some photos of your national multiplier event

So what now?

The project deliverables will be available through the [website](#). Furthermore, the Community will be available and properly curated by the partnership.

We invite you to participate in the community, to give us feedback on the productions and mainly, to use them and exploit them to make a better school education system.

Thank you for your support.
